EnE 262 - Introduction to Environmental Engineering  
Fall 2016

**Text:**  
2) Handouts, Internet references, past powerpoint and report presentations

**Instructor:**  
Paul Schorr, P.E. Room 245 Colton Hall, (973) 642-4599, (973) 596-5790 Fax, e-mail: [capitolgateway@yahoo.com](mailto:capitolgateway@yahoo.com)  
Office Hours: Tuesdays 11 am to noon Walk-ins on Tuesdays & by appointment

**Lab TA:**  
to be determined  
Office Hours: to be determined

</tr>
</thead>
</table>
| 1 | -Introduction; Definitions, Regulations, and Standards, Environmental Ethics, Teams, Projects, Debate  
-Mass Balance and Natural Environmental Systems | Ch. 1  
Ch. 2 |
| 2-3 | -Hydrologic Cycle, Team Updates & Debate  
-Physical, Chemical & Biological Parameter | Ch. 4  
Ch. 5 |
| 3-7 | -Water Treatment, Team Updates & Debate  
-Researching Published References & Writing Review Papers  
9/24 Lab on Alkalinity meets in Colton 414  
10/13 Lab on Hardness meets in Colton 414 | Ch. 6 |
| 8 (Oct 22) | Midterm, Team Updates & Debate | |
| 8-10 | -Water Quality Management, Team Updates & | Ch. 7 |
| 10-11 | Wastewater Treatment, Team Updates and Debate  
11/17 Lab on Jar Testing | Ch. 8 |
| 11-12 | -Air Pollution & Control, Team Updates & Debate | Ch. 9 |
| 12-13 | -Noise Pollution & Control, Team Updates & Debate | Ch. 10 |
14 -Solid and Hazardous Waste Management, 12/8 Final Paper Presentations-Papers due [Ch. 11-12]

TBD Final Exam

General Notes: Field trips to an environmental facility will be scheduled during the semester. Lecture slides will be placed on Moodle. No late assignments accepted.

Department of Civil and Environmental Engineering

**ENE 262 Introduction to Environmental Engineering**

**Description:**

To introduce students to the integrated science, engineering, design and management concepts of engineered environmental systems. The course will cover environmental regulations and standards, professional engineering ethics, environmental parameters, mass balance and natural systems, water quality management, water and wastewater treatment, air pollution control, noise pollution, and solid and hazardous waste management. Background material and laboratories in the environmental sciences and management areas will be covered. Group term papers, weekly updates and presentations will be required of teams of 2 to 4 students who will define objectives, collect data, analyze, collaborate, report and present their findings on three special projects: lead in drinking water; algal toxins in drinking water; hazardous waste sites in water supply watersheds. Each week each team will update one another. Examples of prior team reports and powerpoint presentations will be provided.

**Prerequisites:** Chem 125, Math 112, and Phys. 121

**Textbook(s)/Materials Required:**

2) Handouts and class presentations
**Course Objectives:**

1. Provide students with the most relevant environmental regulations, standards, ethics and the driving forces behind environmental science and engineering projects.

2. Provide students with the engineering background and monitoring techniques needed to assess environmental quality in terms of the physical, chemical and biological aspects.

3. Provide students with the techniques necessary to understand mass balance in environmental systems.

4. Provide students with the basic scientific and engineering principles of water and wastewater treatment, air pollution control, noise pollution, and solid and hazardous waste management.

5. Provide students with techniques and opportunities to write, debate and present environmental and engineering reports

**Topics: PROJECTS THAT COMBINE**

Definition of Environmental and Professional Engineering

Impact of engineering projects on the environment (i.e. team and special projects)

Environmental legislation. Regulations and standards (past, current and proposed).

Health effects. Risk assessment and management (i.e. team and special projects).

Physical, chemical and biological sciences and parameters

Mass balance and natural systems in the environment.

Water quality management

Water and wastewater treatment.

Air pollution and control.
Noise pollution and control.
Solid and hazardous waste management (i.e. team projects)
Environmental report writing, debate and presentation
Laboratory Experiments in the environmental sciences.

Schedule:
Lecture/Recitation- 4 hours per week
Laboratory- 1 hour per week

Professional Component: Engineering Topics
Program Objectives Addressed: 1, 2

Prepared By: Prof. Marhaba & Paul Schorr, PE  
Date: 08/26/16

Course Objectives Matrix

<table>

<th>Strategies and Actions</th>
<th>Student Learning Outcomes</th>
<th>Outcomes(a-k)</th>
<th>Prog. Object.</th>
<th>Assessment Methods/Metrics</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Course Objective 1:</strong> Provide students with the most relevant environmental regulations and standards; the driving forces behind environmental science and engineering projects.</td>
<td>Define environmental science and engineering</td>
<td>Understand the role of the environmental scientists and engineers among other engineering disciplines.</td>
<td>f, i, j</td>
<td>1</td>
</tr>
<tr>
<td>Explain and discuss current and proposed relevant regulations and standards.</td>
<td>Learn how Federal/State environmental regulations and standards are developed as well as their impact.</td>
<td>i, j</td>
<td>1</td>
<td>Homework and examinations.</td>
</tr>
<tr>
<td><strong>Course Objective 2:</strong> Provide students with the scientific background needed to assess environmental quality in terms of the physical, chemical and biological aspects.</td>
<td>Provide an overview of environmental sciences and parameters.</td>
<td>Basic knowledge of reaction kinetics and physical, chemical and biological parameters in environmental pollution.</td>
<td>a, b, e</td>
<td>1, 2</td>
</tr>
<tr>
<td>Conduct experiments in the environmental sciences.</td>
<td>Learn how to analyze and understand physical and chemical environmental parameters and processes</td>
<td>a, b, c, d, k</td>
<td>1, 2</td>
<td>Laboratory group discussions and laboratory reports.</td>
</tr>
</tbody>
</table>
**Course Objective 3:** Provide students with the tools necessary to understand mass balance in environmental systems.

| Illustrate the mass balance approach. | Understand how environmental pollution is assessed using the mass balance scientific approach. | a, b, c, e, k | 1, 2 | Homework, class examples and examinations. |

**Course Objective 4:** Provide students with the basic scientific and engineering principles of water and wastewater treatment, air pollution control, noise pollution, and solid and hazardous waste management.

<table>
<thead>
<tr>
<th>Introduce the scientific and engineering principles of water treatment.</th>
<th>Learn how to characterize source water, and the best available technologies (BAT) for physical and chemical treatment of drinking water.</th>
<th>a, b, e, h, j</th>
<th>1, 2</th>
<th>Homework, class discussions and examinations.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Introduce the scientific and engineering principles of wastewater treatment.</td>
<td>Learn how to characterize wastewater, and the BAT for physical, chemical and biological treatment of wastewater.</td>
<td>a, b, e, h, j</td>
<td>1, 2</td>
<td>Homework, class discussions and examinations.</td>
</tr>
<tr>
<td>Introduce the scientific and engineering principles of air pollution and control</td>
<td>Learn the common air pollutants, and their pathways, and the various technologies available for control.</td>
<td>a, h, j</td>
<td>1</td>
<td>Homework, class discussions and examinations.</td>
</tr>
<tr>
<td>Introduce the scientific and engineering principles of noise pollution and control.</td>
<td>Learn the effects of noise on people and communities, as well as methods of noise measurement and control.</td>
<td>a, h, j</td>
<td>1</td>
<td>Class examples, and examinations.</td>
</tr>
</tbody>
</table>

- **a, b, c, e, k**
- **1, 2**
- **Homework, class examples and examinations.**
- **Homework, class discussions and examinations.**
- **Homework, class discussions and examinations.**
- **Homework, class discussions and examinations.**
- **Class examples, and examinations.**
| Introduce the scientific and engineering principles of solid and hazardous waste management. | Learn the regulatory definitions of solid and hazardous wastes, and the methods used to characterize, handle wastes from their source to their final ultimate disposal or reuse. | Homework, class discussions, and examinations. |

**Course Objective 5: Introduce students to environmental report writing.**

| Provide the mechanisms of environmental report writing and debate | Learn the appropriate and inappropriate terminology used in environmental report writing, sources of appropriate data, and write a case study. | a, d, g, h, i, j | 1, 2 | Class discussions, and case study Paper and debate |

**CEE Mission, Program Objectives and Student Outcomes**

The mission of the Department of Civil and Environmental Engineering is:

- to educate a diverse student body to be employed in the engineering profession
- to encourage research and scholarship among our faculty and students
- to promote service to the engineering profession and society

Our program objectives are reflected in the achievements of our recent alumni.

1 **Engineering Practice:** Recent alumni will successfully engage in the practice of civil engineering within industry, government, and private practice, working toward sustainable solutions in a wide array of technical specialties including construction, environmental, geotechnical, structural, transportation, and water resources.

2 **Professional Growth:** Recent alumni will advance their skills through professional growth and development activities such as graduate study in engineering, professional registration, and continuing education; some graduates will transition into other professional fields such as business and law through further education.

3 **Service:** Recent alumni will perform service to society and the engineering profession through membership and participation in professional societies, government, educational institutions, civic organizations, and humanitarian endeavors.
Our student outcomes are what students are expected to know and be able to do by the time of their graduation:

(a) an ability to apply knowledge of math, science, and engineering

(b) an ability to design and conduct experiments, as well as to analyze and interpret data

(c) an ability to design a system, component or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability

(d) an ability to function on multi-disciplinary teams

(e) an ability to identify, formulate, and solve engineering problems

(f) an understanding of ethical and professional responsibility

(g) an ability to communicate effectively

(h) the broad education necessary to understand the impact of engineering solutions in a global, economic, environmental, and societal context

(i) a recognition of need for, and an ability to engage in life-long learning

(j) a knowledge of contemporary issues

(k) an ability to use techniques, skills and modern engineering tools necessary for engineering practice
